Metabolomics publishes original research as well as reviews regarding the development and application of metabolomics in a wide variety of areas. These include pre-clinical and clinical sciences, mammalian, plants and microbes, as well as systems biology integration with transcriptomics and proteomics.

The style and standing of the journal very much depends on the quality of the submitted manuscripts, as well as on the

referees' evaluations on the article's content. These reviews are time consuming and *Metabolomics* is most grateful for the time our referees spend on these most valuable tasks. We would therefore like to acknowledge the crucial contributions made by our referees during the last year.
